

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (previously presented) In a distributed network environment having a server computer system and a plurality of managed resources including hardware and software resources, each resource maintaining a plurality of objects, a method of representing an object maintained by a first resource comprising:
  - receiving a first schema document that conforms to a property sheet definition such that the first schema document defines a property sheet;
  - receiving two or more second schema documents that conform to a property page definition to thereby define a plurality of property pages, wherein at least one property page originates from a first resource and at least one property page originates from a second resource, wherein the first resource is a software resource, the second resource is a hardware resource, and the second resource being different from the first resource;
  - modifying the property sheet to include the received property pages; and
  - wherein the property sheet represents the object.
2. (original) A method as defined in claim 1 wherein the property sheet comprises object-type information applicable to objects of the same type, and wherein the property pages comprise resource-specific information.
3. (original) A method as defined in claim 1 wherein the method further comprises:
  - receiving a request to display information related to an instance of an object;
  - accessing the property sheet related to the object-type of the instance of the object;
  - displaying object-type information gleaned from the property sheet;
  - using the property pages of the property sheet, displaying information related to resources associated with the instance of the object;
  - requesting the resources associated with the instance of the object to supply instance-specific information; and
  - displaying received instance-specific information from the associated resources.

4. (original) A method as defined in claim 3 wherein at least one property page includes a pointer to executable code on its associated resource for resolving a request for instance specific information.

5. (original) A method as defined in claim 4 wherein the code relates to a search engine on the associated resource.

6. (original) A method as defined in claim 1 wherein the predetermined definitions for the property sheet and property pages are XML document type definitions.

7. (original) A computer program product readable by a computer and encoding instructions for executing the method recited in claim 1.

8. (original) A computer program product readable by a computer and encoding instructions for executing the method recited in claim 2.

9. (original) A computer program product readable by a computer and encoding instructions for executing the method recited in claim 3.

10. (original) A computer program product readable by a computer and encoding instructions for executing the method recited in claim 6.

11. (currently amended) In a network environment having a computer and multiple resources, a computer program product readable by the computer and having stored thereon a computer readable data structure for managing an object associated with multiple resources, the data structure comprising:

a property sheet displayable to a user on the network environment representing the object maintained by one of the multiple resources;

a first property page describing properties of the object associated with a software resource, the first property page generated by the software resource;

a second property page describing properties of the object associated with a hardware resource, the second property page generated by the hardware resource; and

wherein the first and second property pages are stored in association with the property sheet.

12. (original) A computer program product as defined in claim 11 wherein the property sheet relates to object type information and wherein the property pages relate to resource-specific information.

13. (original) A computer program product as defined in claim 12 wherein at least one property page includes a pointer to executable code on its associated resource for resolving a request for instance specific information.

14-20. (canceled)
